STARTUP PROFILE

LiftIQ

AI-powered predictive crowd management for the lifts you already have

Address: [Incubator / office address, City, PIN]

Abstract: LiftIQ is a DeepTech / PropTech startup that turns existing lifts into smart lifts. It reuses a building's lobby CCTV and adds an external edge-AI controller that predicts floor-wise demand and optimises lift dispatch, with no lift replacement and no changes to the manufacturer's control board.

Startup: LiftIQ [Private Limited, if registered] was formed in [YEAR] by Komolika, Zainab Farooqui, Samrudhi Jadhav and Sanika Sonavane (Group No. 9: Ultron).

About Us

Name	Role	Focus
Komolika	Technology & Platform Lead	Edge-AI system integration; committee dashboard and UI
Zainab Farooqui	AI & Data Lead	Crowd detection model; demand prediction engine
Samrudhi Jadhav	Operations & Hardware Lead	Installation and vendors; safety and compliance
Sanika Sonavane	Business & Finance Lead	RWA outreach and pricing; financial model and funding

Komolika
Technology & Platform Lead

Zainab Farooqui
AI & Data Lead

Samrudhi Jadhav
Operations & Hardware Lead

Sanika Sonavane
Business & Finance Lead

Advisors to onboard: an elevator-systems and safety expert, and a hardware installation partner.

Executive Summary

Residents of high-rise housing societies lose an estimated 5–15 minutes a day to overcrowded lifts at peak hours (to be validated in our pilot). Replacing or adding lifts costs lakhs of rupees and causes weeks of disruption, and OEM smart-dispatch systems need new lifts or a control-board swap.

LiftIQ fills the gap. Our compact edge-AI controller is mounted outside the lift, counts crowds per lobby and floor from existing CCTV, forecasts demand for the next few minutes, and sends optimised dispatch to the lifts, which keep their own controllers. Video is processed on the device and only counts leave it.

We sell to Resident Welfare Associations (RWAs) for a one-time installation fee plus a monthly subscription, starting with G+10 and taller societies in Mumbai, then metro and Tier-1 cities, and later offices, malls, hospitals and metro stations.

Current stage: concept, pre-pilot. Market and financial figures are planning assumptions that we will validate through RWA interviews and a pilot.

Company Description

Company Vision

Waiting for a lift becomes a thing of the past, in every building and every Indian city.

Company Mission

To turn existing lifts into smart lifts with AI and a low-cost retrofit, so residents, especially elderly people and families, spend less time waiting and more time living.

Company Values

- **Accessible:** fair for elderly people, children and families.
- **Safety first:** never compromise normal lift operation.
- **Privacy first:** video stays on the device; only counts leave.
- **Affordable:** a fraction of the cost of new lifts.

Product

- **Edge-AI controller:** compact unit mounted outside the lift; runs all models locally.
- **CCTV integration:** reuses existing lobby cameras; adds cameras only where absent.
- **Prediction and dispatch engine:** forecasts floor-wise demand and optimises lift allocation.
- **Committee dashboard:** wait-time reports, usage patterns and alerts for the RWA.

Business Model and Plan

- **Pricing per building (illustrative):** ₹1.2 lakh one-time installation fee plus ₹3,000 per month subscription, about ₹30 per flat per month for a 100-flat society.
- **Year-one plan:** validate demand with 10+ RWAs and file a patent application (months 1–3); build the prototype with an elevator-safety expert review (4–6); pilot in 2 societies (7–9); convert pilots to paid, install 8 more buildings and close the seed round (10–12).
- **Funding need:** about ₹35 lakh seed funding, projecting operating breakeven in Year 3.
